CHUKWUEMEKA EMMANUEL EKINE

Junior Software Engineer

08127575050, 09039124772 | chukwuemekacodev@gmail.com |portfolio | GitHub |LinkedIn | Lagos

SUMMARY:

with over 5 years of building full Stack applications. Specializing in JavaScript technologies. I've crafted modern web applications using MERN stack, focusing on user experience design and Responsive web design principles with tailwind framework and css3 media Queries. My experience spans HTML5, CSS, JavaScript, **PYTHON**, **C#, FLUTTER(dart)** and JSON, with proficiency in **REACT, REACT-NATIVE** and **NEXTJS** frameworks. I've designed UI components, integrated RESTful web services using JSON and implemented React.js dynamic user interface and real time updates. I'm well-versed in ES6 and **Typescript**. Leveraging Node Package Manager **(NPM)** for module management and tools like **Express.js, Next.js, Mongoose**. I've applied **Agile** methodology for project execution and actively principled in scrum meetings.

SKILLS:

- **Frontend & Backend Skills:** HTML5, CSS3, JavaScript(ES6), Typescript, Flutter(Dart), React, React-Native, Next.js, NodeJs, ExpressJs, Python(Django), C# (ASP.Net Core), Tailwind CSS.
- **Database**: my SQL, Microsoft SQL Server, mongo DB, Redis.
- **DevOps:** CI/CD (Netlify, Vercel, Pipeline), Docker.
- **Version Control Systems:** Git (GitLab, GitHub).

EDUCATION:

Federal University of Technology Owerri - Information Technology | Currently enrolled

EXPERIENCE:

Backend Engineer
Nuel Technologies | Lagos, Nigeria **December 2024 – Present**

- Lead the backend engineering team in building software products from the ground up.
- Design and implement scalable backend architectures for web and mobile applications.
- Develop secure and maintainable RESTful APIs using Node.js and Express.js.
- Design and manage relational databases using MySQL.
- Implement authentication, authorization, and role-based access control systems.
- Optimize database performance and application scalability.
- Collaborate with frontend and mobile teams to define technical requirements and system architecture.
- Establish backend development standards, code review processes, and engineering best practices.

Principal Frontend Engineer (Volunteer)
iHealth and Wellness | United States of America **March 2025 – November 2025**

- Led the development of a comprehensive **Admin Dashboard** for internal system management.
- Designed and implemented scalable frontend architecture using React.js and tailwind CSS.
- Built role-based access control interfaces and data visualization components.
- Optimized performance and improved UI responsiveness across large datasets.
- Collaborated closely with backend engineers to integrate secure APIs.
- Mentored developers and enforced clean code standards and best practices.

React Native Developer
Carrot Suit | Lagos, Nigeria **September 2024 – March 2025**

- Sole Mobile Developer responsible for building the sports betting application from scratch using React Native.
- Designed and implemented the application's architecture, navigation, and core user experiences.
- Consumed and displayed live match data, betting odds, and betting markets through backend APIs.
- Developed bet slip functionality, wager selection workflows, and betting interfaces.
- Implemented efficient state management and real-time updates for dynamic application data.
- Optimized application performance to deliver a smooth cross-platform experience on Android and iOS.
- Collaborated closely with backend engineers to integrate APIs, authentication, and payment systems.
- Participated in testing, deployment, bug fixing, and feature enhancements.

Associate software engineer
Ochefi Technologies **June 2023 – February 2024**

- Developed and maintained scalable full-stack web applications using the MERN stack.
- Built RESTful APIs and integrated frontend components with backend services.

- Participated in code reviews and followed best practices for clean and maintainable code.

Software Engineer Intern
Naving Technologies **March 2021 – April 2022**

- Developed dynamic web and mobile applications using React.js, React Native, and Node.js.
- Assisted in building and integrating RESTful APIs.
- Gained hands-on experience across the full software development lifecycle.

PROJECT:

PROJECT: Data Management Desktop App	**ROLE:** Contract Software Developer

Developed a desktop application for church membership management, financial tracking, and operational reporting using Electron.js and React.js. Designed and implemented a scalable system for managing member records, tracking income and expenses, and generating actionable insights through interactive dashboards and visual reports. Built data export functionality to streamline record keeping and reporting processes, while ensuring a responsive and user-friendly experience.

Key Contributions:

- Built a cross-platform desktop application using Electron.js and React.js.
- Developed membership management modules for storing and maintaining church member records.
- Implemented financial tracking features for monitoring income and generating reports.
- Created interactive charts and analytics dashboards using Chart.js for data-driven decision making.
- Developed RESTful APIs with Express.js to support application functionality.
- Designed and managed MongoDB databases for secure and efficient data storage.
- Implemented data export capabilities for administrative and reporting purposes.
- Optimized application performance and improved usability through a modern UI built with Tailwind CSS.

Technologies: Electron.js, React.js, Tailwind CSS, Express.js, MongoDB, Chart.js

PROJECT: GigHive	**ROLE**: Software Engineer

Developed a service marketplace mobile application that connects skilled professionals with clients seeking on-demand services within their local area. Designed and implemented features that enable users to discover nearby service providers, request services, manage bookings, and communicate efficiently through the platform. Focused on delivering a seamless user experience, real-time interactions, and scalable backend integration.

Key Contributions:

- Developed a cross-platform mobile application using Flutter and Dart.
- Built intuitive user interfaces for service discovery, booking, and provider management.
- Integrated backend APIs to support authentication, user management, service requests, and booking workflows.
- Implemented location-based functionality to connect clients with nearby skilled professionals.
- Optimized application performance to ensure a smooth and responsive user experience.
- Collaborated with backend services powered by Express.js, MySQL, and Redis.
- Implemented secure user authentication and session management.
- Participated in application testing, debugging, and deployment processes.

Technologies: Flutter (Dart), Express.js, MySQL, Redis
